Historic Gray Natural Slate

Natural slate is formed from thousands of years of heat and pressure below the earth's surface. The layers of compressed organic material formed a stone with natural flat and even surface characteristics.

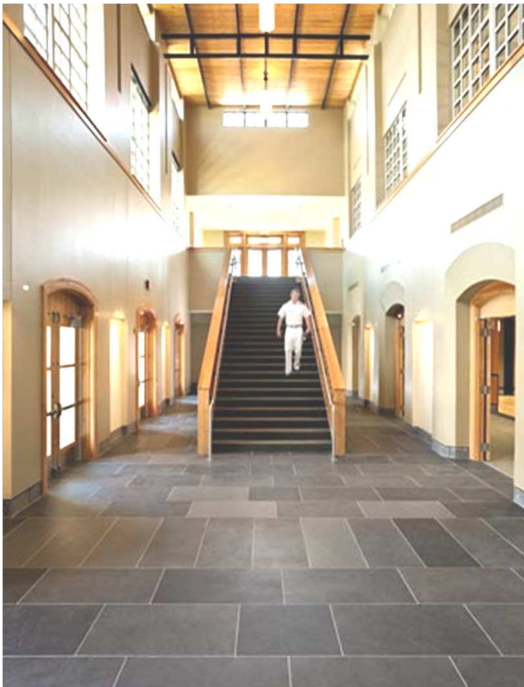

Historic Gray Natural Flooring Slate is available in widths up to 24" at 3/8" thickness. The gauged backside of the slate provides uniform thickness from tile to tile. 3/8" flooring is available in honed, brushed, and natural cleft finishes.

Historic Gray Natural Structural Slate is the same stone cut to a thickness of 3/4". The maximum width and length of this stone is 10'.

Care should be taken to make sure the stone is fully supported with installation. Sealers may also be applied to enhance the color of the stone, protect the slate from staining penetrants, and to protect the grout from deterioration.

Historic Gray with black accents.

Historic Gray and black mixture.
